CODESOFT v2012
CODESOFT v2012 Virtual Machine

RELEASE NOTES – CODESOFT 2012.00.02
May 2013

Table of Contents

System Requirements
New Features & Enhancements
New Device Support
Fixed Defects
Known Limitations
Compatibility with other TEKLYNX Software

System Requirements

Windows 8
Windows Server 2012
Windows 7 SP1
Windows Server 2008 SP2
Windows Server 2008 R2 SP1
Windows Vista SP2
Windows Server 2003 SP2
Windows XP SP3
Windows x64 bit platform

Installation requires **Administrator's** privileges.

Back to Top

New Features & Enhancements

Uniscribe management (v2012)
This resolves issues with specific language manipulation (Japanese, Chinese, Arabic,…) and when there is mixture of Right to Left (Arabic) and Left to Right text.

Windows 8 Support (v2012)

CODESOFT 2012 can be run on the Windows 8 operating system.

Evaluation mode (v2012)
In Evaluation mode, printing is not possible anymore.

Port Watch (v10.00.00)
This new free variable type Port Watch allows the reception of data from external devices connected by USB, COM, or Ethernet.

Layers and dual side printing (v10.00.00)
New layers allow printing header and footer labels and dual side printing. This can be used to print form documents like invoices and orders, where different information needs to be printed on the back side of the page.

Text Art improvements (v10.00.00)
New Text Art capabilities allow drawing text based on the shape being used (text can be drawn inside or outside of the shape). In such cases, the text is not drawn where it will overlap other objects. This can be used for GHS labels where all of the space on the label must be optimized based on the number of objects that need to be printed.

RTF Field – Fit to Frame option (v10.00.00)
This option eases the creation of GHS labels. Hazard Statements and Precautionary Statements can mix different formatting options (bold, underline, etc.) and still need to fit to a frame to optimize space on the label and avoid overlapping.

EPS and PDF support (v10.00.00)
Support for .eps files (Encapsulated PostScript) is in vector format (no longer supported through reading the BITMAP preview as it was previously). Note: This feature relies on a GhostScript freeware component that needs to be installed. For compatibility, if the GhostScript is not installed, the BITMAP header, if existent, will be imported as it was in previous versions.
NOTE: GhostScript 32bits is required.

Click Print (v10.00.00)
New easy-to-use printing interface for Print-only users.

New Barcodes (v10.00.00)
Micro QRCode, ISBT128 Wizard, Kix Code, Japanese post, Australian post, Telepen, and Code 1.

Pocket Printing (v10.00.00)
This add-on allows printing with Windows Mobile devices.

Control Variables (v10.00.00)
@APPROVED control variable is used to indicate whether or not the document is approved. @VALIDFORPRINT control variable is used to indicate if the document is valid for printing. Both control variables can be used to prevent unapproved printing.

@VALIDFORPRINT control variable to indicate if the document is valid for printing. The @APPROVED and @VALIDFORPRINT control variable can be used to prevent printing document not approved.

New software protection (v9.10.00)
New software protection method has been implemented.

Data sources categories (v9.00.02)
Data sources can now be organized in sub-categories at a display level (Data Sources View).

Autocad Files (v9.00.02)
CODESOFT provides support for Autocad files up to version 2010.

Full clipping mode (v9.00.02)
This new document setting allows graphic Text and Barcodes to be clipped when positioned partially outside of the label.

Modulo 16 check digit (v9.00.02)
Modulo 16 check digit is now available for CODABAR and as a formula.

Database Manager – default printer (v9.00.02)
A default option for printer selection allows you to use the printer defined in the document.

Report and form capabilities (v9.00.01)
ListField capabilities are extended to support report printing (see ListField sample for more information). Word wrapping inside a cell is now possible using < BR > sequence.

The ListField is now able to generate multiple labels at print time if data does not fit on a single page. This option is called Manage Multiple Pages. Table Lookup can now return multiple records.

HIBC wizard update (9.00.01)
HIBC wizard has been updated to support HIBC Specification, Rev. 2.3.

“Load Printer saved in document” setting updated (v9.00.01)
CODESOFT now searches for the printer with exactly the same name specified in the application. If this printer is not found, the application searches for the printer with the same model name, which is consistent with version 9.00.00 and previous.

Tracking Report (v9.00.01)
The Tracking Report is now accessible in the ActiveX interface.

Improved toolbars (v9.00.00)
CODESOFT toolbars have been redesigned to simplify basic tasks (such as object creation).

User interface enhancements (v9.00.00)
The user interface has been updated to be more consistent with the look and feel of Microsoft Office.

New wizards (v9.00.00)
Wizards have been added for Database, Table Lookup, and Formula creation. Enhancements to existing wizards provide graphical assistance in creating new labels and accessing data from LABEL ARCHIVE.

Simplified installation (v9.00.00)
When installing CODESOFT 9, the user will no longer be required to select a product range. Installation of add-ons and tools is now integrated in the main install, which eliminates the need to perform separate processes for these elements.

Graphical query builder (v9.00.00)
A new SQL Query builder simplifies the creation of simple and complex database queries.

Label Comparator (v9.00.00)

The Label Comparator allows users to compare two versions of the same label, either draft versions or production and test versions.

Filler view (v9.00.00)
The Filler form is now available in a separate view. This allows you to have both the label design and the Filler form open simultaneously.

GS1 Databar access (v9.00.00)
The GS1 Databar is now accessible from the GS1 wizard.

HIBC wizard (v9.00.00)
A wizard has been added for HIBC.

DotNet wrapper (v9.00.00)
This component allows easy integration of CODESOFT with .NET technology (C# or VB.NET).

Folders reorganization (v9.00.00)
Here is the description of the new reorganization of the folder structure:

Samples & Tutorial	
Sample Labels	<SharedDocuments>\Teklynx\CODESOFT 9\Sample\Labels
Sample Forms	<SharedDocuments>\Teklynx\CODESOFT 9\Sample\Forms
Sample Compliance	<SharedDocuments>\Teklynx\CODESOFT 9\Sample\Compliance
Integration (ActiveX Samples)	<SharedDocuments>\Teklynx\CODESOFT 9\Integration
Common files	
Data files (including databases)	<SharedDocuments>\Teklynx\CODESOFT 9\Data
Describers	<SharedDocuments>\Teklynx\CODESOFT 9\DSC
Specific Formulas	<SharedDocuments>\Teklynx\CODESOFT 9\Formulas
Image Gallery	<SharedDocuments>\Teklynx\CODESOFT 9\Galleries
Images	<SharedDocuments>\Teklynx\CODESOFT 9\Images
Patterns	<SharedDocuments>\Teklynx\CODESOFT 9\Patterns
Queries	<SharedDocuments>\Teklynx\CODESOFT 9\Query
Shapes	<SharedDocuments>\Teklynx\CODESOFT 9\Shapes
Print files	<SharedDocuments>\Teklynx\CODESOFT 9\Print
Application configuration files	**Files created by the application and its tools/add-ons:**
Shared variables files	<CommonAppData>\Teklynx\CODESOFT 9\Globvar
Network printers settings	<CommonAppData>\Teklynx\CODESOFT 9\Printers
Config files (Cs.ini, user.ini)	<CommonAppData>\Teklynx\CODESOFT 9\

New OCX Field (v8.51.02)
This new object type allows you to use 3rd-party OCX components inside your label.

New Formulas (v8.51.02)
New formulas are now available:
Week (calculates week number - ISO8601), Extract (extracts string from a string), ReplaceString (replaces string occurrence(s) with another string)

Space correction for Datamatrix (v8.51.02)
This option allows you to provide space correction between barcode elements.
This can be useful for inkjet printers.

New barcode symbologies (v8.51.01)
Chinese sensible code.
ITF14 supports more options for lines or boxes that surround the code.

New GHS pictograms (v8.51.01)
New pictograms based on GHS normalization are added to the Image Gallery.

New Compliance labels (v8.51.01)
New compliance labels are provided in different areas, such as Retail, Shipping, Healthcare, and Automotive.

New barcode symbologies (v8.51)
Code 49, Intelligent Mail (USPS 4 State), ISBN 13, and RSS expanded stacked.

New Formulas (v8.51)
New formulas are now available to allow calculation of the "Best before date" and "Expiration date" at print time: BestBefore, DateValue, DateOffset.

Database loops (v8.51)
It is now possible to specify the number of times a set of records should be printed when using a database.

Refresh table lookup at print time option (v8.51)

The Refresh table lookup at print time option allows the system to reevaluate Table Lookup fields in a document at print time to ensure the most current information is used.

Silent installation (v8.51)
CODESOFT installation can be run in Silent mode, using the basic command line "<Path>\Setup.exe" /s /v"/qn INSTALLLEVEL=150". This command installs CODESOFT in English in the default folder with all features. For additional parameters, refer to the TEKLYNX web site or the online help.

Pre-requisite installation (v8.51)
CODESOFT pre-requisite (.NET framework 2.0 SP1, MDAC 2.8, Adobe Acrobat Reader 8) are now automatically installed if necessary.

Guides (v8.51)
Quick Start Guide and Administrator's guide are now directly accessible from the Help menu.

Label Background with image (v8.50.07)
A new Extended tab in Document Properties allows you to define a background. The user can select an image and different options to define the background that applies to the current label.

OCX Component (v8.50.07)
A new OCX control named "Labeling Manager control" is provided. This allows easy integration in Microsoft Office applications.

Resolution independent (v8.50.05)
Allows you to design labels that will be printed identically on different printers (office or thermal printers). To access to this option, use the command: File > Properties > Preview.

New User interface language (v8.50.05)
The Romanian language is now available for the User Interface.

Requery button (v8.50.05)
A Requery button has been added in the Query result dialog box. This command runs the query and updates the grid.

Windows graphical emulation (v8.50.04)
Enables you to standardize printing of your labels regardless of the selected printer (Thermal printers or Windows printers). To access to this option, use the command: File > Properties > Preview.

Wizard Upgrade tool (v8.50.02)
This tool eases update from CODESOFT 8 to CODESOFT 8.5. It allows you to transfer the settings and files from the previous version to the new one. You can launch it from C:\Program Files\TKI\8\Common\Tools\WizardUpgrade\UpgradeWizard.exe.

New Wizards (v8.50)
New wizards ease the creation of:

- Documents
- Objects like Text, Barcode, and Image
- Variables like Counter, Form, Free, and Date

The wizards can be individually activated and deactivated.

Enhanced menu look and feel (v8.50)
A new look and feel for menus is now available. This is similar to what is available in Office 2003. Two themes are available.

Enhanced Open dialog box (v8.50)
The new open look and feel for the Open dialog box is used. This provides the left toolbar icons with direct access to some pre-defined folders.

Enhanced Print dialog box (v8.50)
The Print dialog box now proposes several tabs when expanded.
This will allow you to check, based on current print settings (number of labels and pages), if the printing is optimized using the "Performance" tab.

Text Vertical alignment (v8.50)
This option allows defining a Vertical alignment for text paragraph. This option is only available with the "Fit to frame" option.

Text on any angle (v8.50)

In the Shape Settings tab, the Shape option "Polyline" allows the user to select any kind of shape. This option can be very useful in conjunction with Text Art to align text on any angle.

Label Background definition (v8.50)
It is now possible to select a label background without having to use a name based on the stock type/name.
A new "Background" combo box allows you to select the EMF/WMF file that will be used as label background. The EMF/WMF files need to be published in the C:\Program Files\TKI\8\Common\LFM directory.

Network licensing (v8.50)
A new range is available through network licensing: Runtime.
For License Manager, the Shared folder is changed.
On Vista, you must share "c:\Programdata\TKI\LicenseManager\TkDongle" as "TkDongle".
On the other systems, you must share "C:\Documents and Settings\All Users\Application Data\TKI\LicenseManager\TkDongle" as "TkDongle".

Superimposing (v8.10)
An optional feature allows you to superimpose objects to preserve the readability or physical space on the label. This feature is useful when using a barcode, to prevent any other object from being overlaid on top of it. This feature can be accessed by going to the General tab of the object properties.

Norm GS1 (v8.10)
Choosing to use the GS1 norm enables barcode verifications according to GS1 (Formerly EAN) recommendations. This new option is available in the Tools \ Options dialog box (Other tab). When the option is enabled, it will check that the barcodes conform to the different requirements of the GS1 normalization, such as narrow bar size, check digit, human readable, and so on.

RFID (v8.10)
A new RFID button, available on the toolbar, provides a direct link to the RFID settings.

TKTEXTIL.TTF (v8.10)
New symbols have been added in TKTEXTIL.TTF to fulfill the COFREET requirements. Refer to the TKTextil.lab sample file for additional information.

Database Manager (v8.10)

The User Interface of the Database Manager has been improved, making it more intuitive and easy to use.

- The general user interface has been refreshed to give it a better look and feel.
- New menu entry "File\Open" allows the user to directly open a basic database file (Access, Excel, dBase).
- It is now possible to "duplicate record(s)" by right-clicking on selected records.
- More feedback is provided to the user when operations cannot be performed due to limited user rights or compliance with database structure.
- It is possible to limit the Database Manager features by modifying the file C:\Program Files\TKI\8\Common\Tools\DMan\ProductSettings.cfg. Only advanced users should attempt this.
- It is now possible to customize the display font.

Print by printer resolution (v8.10)
Uses an algorithm independent to the paper format, to send only the positions and sizes linked to the Windows printer resolution. The current print algorithm adjusts object size and position when you switch, for instance, from a A4 page to Letter page (on a Windows printer). This is similar to the method used in Microsoft Word, and the advantage is that the objects are adjusted at print time so that everything fits on the page/label. The new print algorithm only uses the printer resolution, which means that the object's position and size are fixed, but at print time, you may notice that some objects are outside of the page/label or partially cut.

ActiveX (v8.10)
VC++ and C# ActiveX samples available on CD have been updated to demonstrate how to use Events.

Back to Top

New Device Support

The following devices and their associated drivers have been added in this version:

Fixed Defects

Version	Ticket ID/ Defect ID	Description
2012.00.00		
	17616 - TKX-22864-S6M1	Table ALIAS not accepted with where clause
	18043 - TKX-20389-V0Q8	Fields keep old value when query does not return record
	18023- TKX-17061-V0N0	Linked counters update issue with 2 labels per row
	18041 - TKX-20052-Q4P7	HIBC Wizard omits $$ when using date format YYJJJ and separate bar codes
	18550-TKX-25914-R4G3	Focus was not on quantity field and new printing box
	18567-TKX-24684-S5C7	Bar width of 2/5 interleave barcode not printed correctly in case of some ratio.
	18031-TKX-25387-R9R4	Codabar checksum not calculated correctly
10.00.00		
	54463-20553	Human Readable on GS1 Databar is complete.
	54516-20556	Printer settings now load in Windows printers.
	53085-20066	Job modifier tab now appears in all designated areas.
	63640-20675	Windows printing mode is now available in Runtime.
	72022-20685	Resolved issue with WMF in monochrome palette.
9.10.02		
	54628-20577 54736-20595	Application is now stable when using ASCII file.
	52663-19978 52659-19975	Speed optimization for text with Word Wrap/Fit to Frame features.
	55422-20630	Font and size changes are not modified when data source is changed.
	55124-20624	Variable images coming from formulas are properly managed when used with SENTINEL.
9.00.02		
	49069-19221	Rename method of the PrinterSystem interface is fixed.
	50633-19502 46715-18862	Formula Bestbefore now works with julian day (jj).
	45863-18601	Zoom feature now functions as it did in version 8.50.
	46997-18958	Counter reset on variable change now functions correctly.

Version	Ticket ID/ Defect ID	Description
	48586-19162	Form no longer appears when Form variables do not exist in layout.
9.00.01		
	45538-18481	Date with variable offset (in case of multiple variables) is fixed.
	45835-18597	The shared list user interface can now properly display different code page (i.e., Cyrillic).
	45451-18469	Formula variables are now refreshed while printing.
	45675-18661 45862-18600	The automatic page format for Brady IP printers is improved.
8.51.02		
	34391-16068	Excel files with field names that contain Chinese characters are now working.
	33780-15966	Printout for DataMatrix/QR code containing Chinese characters is now working.
	32222-15961	Barcode wizard is now able to enter alphabetical characters for DataMatrix.
8.51.01		
	31161-15576	Counters with values outside of the alphabet are now accepted at print time (backward compatibility with version 6). A warning is displayed at creation time.
	29434-15335	Lite or Pro versions are no longer able to lock objects.
	27277-14994	Maxicode wizard generates valid default data, whichever mode is selected.
	32486-15747	Display is now correct when using a formula that is using other formulas.
8.51.00		
	24884-14218	Decrementing hexadecimal counter is now decrementing properly.
	14249-12208	Printer speed switch is no longer ignored when printing from SENTINEL.
	25866-14508	EAN-14 can now be based on EAN-128 or ITF-14 symbology.
	20913-13318	Some characters descenders were cut off (for example, the bottom portion of "g") in Rich Text fields.
	11697-13708	In the Runtime version, the printable or non-printable option for objects can now be set through ActiveX.

Back to Top

Known Limitations

- Under win2008 R2, Windows 8 and Windows Server 2012, it is required that the NET3.5.1 is selected via "Program and Files\Turn Windows Features On and Off".

http://msdn.microsoft.com/en-us/library/hh506443.aspx

- Software Key Protection does not support Proxy with authentication. A license that requires internet connection (Online/Platinum) will not be compatible in such case. A possible workaround is to use a Proxy management application.

- In case of Software Key Protection, IP Security Policy Management (IPsec) settings can create slow response time from Activation server if it is blocked.

- To use this product via RDP (remote application / remote desktop), a network license is required on environments such as Remote Desktop Services (formerly Terminal Services), Citrix,..

- Under Windows 8 and Windows Server 2012, if the dongle HASP is not recognized, install the driver manually from the DVD using the following command:
  "<Drive>:\Software\Misc\Hasp_v6.51\Haspdinst.exe -i" (where <Drive> is to be replaced by the letter of the DVD drive).

- When upgrading CODESOFT, we recommend uninstalling any previous versions before installing the new version.

- With subscription licensing, the computer date/time must be set to the correct date/time and should not be modified.

- RTF Field has a limitation when used with Fit to Frame option where the size and/or complexity of the RTF text in the input may cause the displayed text to be truncated.

- Using CODESOFT with LABEL ARCHIVE and Windows Firewall:
  The Windows firewall will try to block the connection to CODESOFT and you will get a system message asking to block or to unblock. Choose Unblock. The labeling software will be added automatically to the list of exceptions in Windows Firewall Configuration parameters.

- If you are using a hardware key protected version under Windows 7, the dongle may not be recognized. In this case, you must install the HASP driver manually. Run "InstallDir"\Tools\Donlge\ HASPUserSetup.exe.

- Text objects with composite data sources or different styles (font size or attributes) should be edited using the text properties dialogue only. If you use the text wizard, the text object becomes fixed with a uniform style.

- When importing an image from a network, a path like //MachineName/Path/Filename cannot be entered directly into the "Image Selection" dialog box. The workaround is to map the network drive, or to drag and drop from the explorer.

- When printed: If a mixed formatting string is used in the input mask, before entering the value, use the backspace button to avoid the loss of the first character.
  To enter a value abc123
  Press " <backspace>abc123" if the format string is "@@@###"

- While using the animation option in the wizards, performance may be slightly reduced.
  Turn off this option for faster performance if needed.

- With a hardware key license, when running CODESOFT while system is not fully initialized, CODESOFT may run in EVALUATION mode.
  Make sure the system is fully loaded before running CODESOFT.

- Please note that you may need Administrator's rights to perform some actions, such as adding a printer with non-direct access or creating a system DSN data source. Please verify that you have sufficient rights before performing these actions.

- Query definition only supports Tables within the default schema. If it is necessary to use a table from another schema, the SQL mode should be used, using a syntax like: SELECT * FROM Schema.Table.

- The Database Manager is a generic database tool that relies on OLE DB Provider (ODBC is not supported). OLE DB Provider or the DBMS itself can both have some limitations. For example, with an Access database, when you set 3 unique fields in Database Manager, only the first one will be set. The recommendation is to use the internal DBMS tools to modify database structure, especially when working on advanced actions (like multiple constraints and primary key modification). The same is true for big tables where the response time can be slow on some operations.

- A database connection must be linked to the DatabaseGrid control displayed in sample form "DBForm.xmf" in order to show information (i.e.; identity.mdb).

- ODBC drivers are recommended for PostgreSQL. With OLEDB drivers, fields may not be enumerated.

- The **Manage Multiple Pages** option for ListField is not supported with POF technology.

- Microsoft defect: MFC Applications leak GDI objects on computer running Windows Server 2003 or Windows XP. Refer to article 319740 in the Microsoft Knowledge Base: http://support.microsoft.com.

- For full Chinese-sensible code support under WinXP\2003\2000, the following prerequisites are required:

- GB18030 support package should be installed: http://www.microsoft.com/downloads/details.aspx?familyid=fc02e2e3-14bb-46c1-afee-3732d6249647&displaylang=en
- Files for East Asian languages should be installed

For WinXP/2003: 54936 Gb18030 Simplified Chinese codepage should be selected.
Note, that for win2000, selection of 936 codepage is enough.

- The label version is guaranteed when using ascending version. When using a different a version, please check that all versions are in the same range:

Backward Compatibility Range	CD Masters	Serialization Version

Compatibility with other TEKLYNX Software

CODESOFT v2012 is compatible and fully tested to work with the following TEKLYNX software packages:

- LABEL ARCHIVE 10
- SENTINEL 2012

- Back to Top

RELEASE NOTES – CODESOFT 2012.00.02 Virtual Machine
May 2013

Table of Contents

System Requirements
New Features & Enhancements
New Device Support
Fixed Defects
Known Limitations
Compatibility with other TEKLYNX Software

System Requirements

Windows 8
Windows Server 2012
Windows 7 SP1
Windows Server 2008 SP2
Windows Server 2008 R2 SP1
Windows Vista SP2
Windows Server 2003 SP2
Windows XP SP3
Windows x64 bit platform

Installation requires **Administrator's** privileges.

Virtual Environment:
This product has been tested on following Virtual Environment platform:
VMWare vCenter Server Version 4.1.0
Citrix XenServer 6.0.2
Microsoft Hyper-V Server 2008 R2
Microsoft Hyper-V Server 2012 Release Candidate
Oracle VM Virtual Box 4.1.18
VMWare Server 2.0.2

Back to Top

New Features & Enhancements

Uniscribe management (v2012)

This resolves issues with specific language manipulation (Japanese, Chinese, Arabic,…) and when there is mixture of Right to Left (Arabic) and Left to Right text.

Windows 8 Support (v2012)
CODESOFT 2012 can be run on the Windows 8 operating system.

Evaluation mode (v2012)
In Evaluation mode, printing is not possible anymore.

Port Watch (v10.00.00)
This new free variable type Port Watch allows the reception of data from external devices connected by USB, COM, or Ethernet.

Layers and dual side printing (v10.00.00)
New layers allow printing header and footer labels and dual side printing. This can be used to print form documents like invoices and orders, where different information needs to be printed on the back side of the page.

Text Art improvements (v10.00.00)
New Text Art capabilities allow drawing text based on the shape being used (text can be drawn inside or outside of the shape). In such cases, the text is not drawn where it will overlap other objects. This can be used for GHS labels where all of the space on the label must be optimized based on the number of objects that need to be printed.

RTF Field – Fit to Frame option (v10.00.00)
This option eases the creation of GHS labels. Hazard Statements and Precautionary Statements can mix different formatting options (bold, underline, etc.) and still need to fit to a frame to optimize space on the label and avoid overlapping.

EPS and PDF support (v10.00.00)
Support for .eps files (Encapsulated PostScript) is in vector format (no longer supported through reading the BITMAP preview as it was previously). Note: This feature relies on a GhostScript freeware component that needs to be installed. For compatibility, if the GhostScript is not installed, the BITMAP header, if existent, will be imported as it was in previous versions.
NOTE: GhostScript 32bits is required.

Click Print (v10.00.00)
New easy-to-use printing interface for Print-only users.

New Barcodes (v10.00.00)

Micro QRCode, ISBT128 Wizard, Kix Code, Japanese post, Australian post, Telepen, and Code 1.

Pocket Printing (v10.00.00)
This add-on allows printing with Windows Mobile devices.

Control Variables (v10.00.00)
@APPROVED control variable is used to indicate whether or not the document is approved. @VALIDFORPRINT control variable is used to indicate if the document is valid for printing. Both control variables can be used to prevent unapproved printing.

@VALIDFORPRINT control variable to indicate if the document is valid for printing. The @APPROVED and @VALIDFORPRINT control variable can be used to prevent printing document not approved.

New software protection (v9.10.00)
New software protection method has been implemented.

Data sources categories (v9.00.02)
Data sources can now be organized in sub-categories at a display level (Data Sources View).

Autocad Files (v9.00.02)
CODESOFT provides support for Autocad files up to version 2010.

Full clipping mode (v9.00.02)
This new document setting allows graphic Text and Barcodes to be clipped when positioned partially outside of the label.

Modulo 16 check digit (v9.00.02)
Modulo 16 check digit is now available for CODABAR and as a formula.

Database Manager – default printer (v9.00.02)
A default option for printer selection allows you to use the printer defined in the document.

Report and form capabilities (v9.00.01)
ListField capabilities are extended to support report printing (see ListField sample for more information). Word wrapping inside a cell is now possible using < BR > sequence. The ListField is now able to generate multiple labels at print time if data does not fit on a single page. This option is called Manage Multiple Pages. Table Lookup can now return multiple records.

HIBC wizard update (9.00.01)
HIBC wizard has been updated to support HIBC Specification, Rev. 2.3.

“Load Printer saved in document” setting updated (v9.00.01)
CODESOFT now searches for the printer with exactly the same name specified in the application. If this printer is not found, the application searches for the printer with the same model name, which is consistent with version 9.00.00 and previous.

Tracking Report (v9.00.01)
The Tracking Report is now accessible in the ActiveX interface.

Improved toolbars (v9.00.00)
CODESOFT toolbars have been redesigned to simplify basic tasks (such as object creation).

User interface enhancements (v9.00.00)
The user interface has been updated to be more consistent with the look and feel of Microsoft Office.

New wizards (v9.00.00)
Wizards have been added for Database, Table Lookup, and Formula creation. Enhancements to existing wizards provide graphical assistance in creating new labels and accessing data from LABEL ARCHIVE.

Simplified installation (v9.00.00)
When installing CODESOFT 9, the user will no longer be required to select a product range. Installation of add-ons and tools is now integrated in the main install, which eliminates the need to perform separate processes for these elements.

Graphical query builder (v9.00.00)
A new SQL Query builder simplifies the creation of simple and complex database queries.

Label Comparator (v9.00.00)
The Label Comparator allows users to compare two versions of the same label, either draft versions or production and test versions.

Filler view (v9.00.00)
The Filler form is now available in a separate view. This allows you to have both the label design and the Filler form open simultaneously.

GS1 Databar access (v9.00.00)
The GS1 Databar is now accessible from the GS1 wizard.

HIBC wizard (v9.00.00)
A wizard has been added for HIBC.

DotNet wrapper (v9.00.00)
This component allows easy integration of CODESOFT with .NET technology (C# or VB.NET).

Folders reorganization (v9.00.00)
Here is the description of the new reorganization of the folder structure:

Samples & Tutorial	
Sample Labels	<SharedDocuments>\Teklynx\CODESOFT 9\Sample\Labels
Sample Forms	<SharedDocuments>\Teklynx\CODESOFT 9\Sample\Forms
Sample Compliance	<SharedDocuments>\Teklynx\CODESOFT 9\Sample\Compliance
Integration (ActiveX Samples)	<SharedDocuments>\Teklynx\CODESOFT 9\Integration
Common files	
Data files (including databases)	<SharedDocuments>\Teklynx\CODESOFT 9\Data
Describers	<SharedDocuments>\Teklynx\CODESOFT 9\DSC
Specific Formulas	<SharedDocuments>\Teklynx\CODESOFT 9\Formulas
Image Gallery	<SharedDocuments>\Teklynx\CODESOFT 9\Galleries
Images	<SharedDocuments>\Teklynx\CODESOFT 9\Images
Patterns	<SharedDocuments>\Teklynx\CODESOFT 9\Patterns
Queries	<SharedDocuments>\Teklynx\CODESOFT 9\Query
Shapes	<SharedDocuments>\Teklynx\CODESOFT 9\Shapes
Print files	<SharedDocuments>\Teklynx\CODESOFT 9\Print
Application configuration files	**Files created by the application and its tools/add-ons:**
Shared variables files	<CommonAppData>\Teklynx\CODESOFT 9\Globvar
Network printers settings	<CommonAppData>\Teklynx\CODESOFT 9\Printers
Config files (Cs.ini, user.ini)	<CommonAppData>\Teklynx\CODESOFT 9\

New OCX Field (v8.51.02)
This new object type allows you to use 3rd-party OCX components inside your label.

New Formulas (v8.51.02)
New formulas are now available:
Week (calculates week number - ISO8601), Extract (extracts string from a string), ReplaceString (replaces string occurrence(s) with another string)

Space correction for Datamatrix (v8.51.02)
This option allows you to provide space correction between barcode elements.
This can be useful for inkjet printers.

New barcode symbologies (v8.51.01)
Chinese sensible code.
ITF14 supports more options for lines or boxes that surround the code.

New GHS pictograms (v8.51.01)
New pictograms based on GHS normalization are added to the Image Gallery.

New Compliance labels (v8.51.01)
New compliance labels are provided in different areas, such as Retail, Shipping, Healthcare, and Automotive.

New barcode symbologies (v8.51)
Code 49, Intelligent Mail (USPS 4 State), ISBN 13, and RSS expanded stacked.

New Formulas (v8.51)
New formulas are now available to allow calculation of the "Best before date" and "Expiration date" at print time: BestBefore, DateValue, DateOffset.

Database loops (v8.51)
It is now possible to specify the number of times a set of records should be printed when using a database.

Refresh table lookup at print time option (v8.51)

The Refresh table lookup at print time option allows the system to reevaluate Table Lookup fields in a document at print time to ensure the most current information is used.

Silent installation (v8.51)
CODESOFT installation can be run in Silent mode, using the basic command line "<Path>\Setup.exe" /s /v"/qn INSTALLLEVEL=150". This command installs CODESOFT in English in the default folder with all features. For additional parameters, refer to the TEKLYNX web site or the online help.

Pre-requisite installation (v8.51)
CODESOFT pre-requisite (.NET framework 2.0 SP1, MDAC 2.8, Adobe Acrobat Reader 8) are now automatically installed if necessary.

Guides (v8.51)
Quick Start Guide and Administrator's guide are now directly accessible from the Help menu.

Label Background with image (v8.50.07)
A new Extended tab in Document Properties allows you to define a background. The user can select an image and different options to define the background that applies to the current label.

OCX Component (v8.50.07)
A new OCX control named "Labeling Manager control" is provided. This allows easy integration in Microsoft Office applications.

Resolution independent (v8.50.05)
Allows you to design labels that will be printed identically on different printers (office or thermal printers). To access to this option, use the command: File > Properties > Preview.

New User interface language (v8.50.05)
The Romanian language is now available for the User Interface.

Requery button (v8.50.05)
A Requery button has been added in the Query result dialog box. This command runs the query and updates the grid.

Windows graphical emulation (v8.50.04)
Enables you to standardize printing of your labels regardless of the selected printer (Thermal printers or Windows printers). To access to this option, use the command: File > Properties > Preview.

Wizard Upgrade tool (v8.50.02)
This tool eases update from CODESOFT 8 to CODESOFT 8.5. It allows you to transfer the settings and files from the previous version to the new one. You can launch it from C:\Program Files\TKI\8\Common\Tools\WizardUpgrade\UpgradeWizard.exe.

New Wizards (v8.50)
New wizards ease the creation of:

- Documents
- Objects like Text, Barcode, and Image
- Variables like Counter, Form, Free, and Date

The wizards can be individually activated and deactivated.

Enhanced menu look and feel (v8.50)
A new look and feel for menus is now available. This is similar to what is available in Office 2003. Two themes are available.

Enhanced Open dialog box (v8.50)
The new open look and feel for the Open dialog box is used. This provides the left toolbar icons with direct access to some pre-defined folders.

Enhanced Print dialog box (v8.50)
The Print dialog box now proposes several tabs when expanded.
This will allow you to check, based on current print settings (number of labels and pages), if the printing is optimized using the "Performance" tab.

Text Vertical alignment (v8.50)
This option allows defining a Vertical alignment for text paragraph. This option is only available with the "Fit to frame" option.

Text on any angle (v8.50)

In the Shape Settings tab, the Shape option "Polyline" allows the user to select any kind of shape. This option can be very useful in conjunction with Text Art to align text on any angle.

Label Background definition (v8.50)
It is now possible to select a label background without having to use a name based on the stock type/name.
A new "Background" combo box allows you to select the EMF/WMF file that will be used as label background. The EMF/WMF files need to be published in the C:\Program Files\TKI\8\Common\LFM directory.

Network licensing (v8.50)
A new range is available through network licensing: Runtime.
For License Manager, the Shared folder is changed.
On Vista, you must share "c:\Programdata\TKI\LicenseManager\TkDongle" as "TkDongle".
On the other systems, you must share "C:\Documents and Settings\All Users\Application Data\TKI\LicenseManager\TkDongle" as "TkDongle".

Superimposing (v8.10)
An optional feature allows you to superimpose objects to preserve the readability or physical space on the label. This feature is useful when using a barcode, to prevent any other object from being overlaid on top of it. This feature can be accessed by going to the General tab of the object properties.

Norm GS1 (v8.10)
Choosing to use the GS1 norm enables barcode verifications according to GS1 (Formerly EAN) recommendations. This new option is available in the Tools \ Options dialog box (Other tab). When the option is enabled, it will check that the barcodes conform to the different requirements of the GS1 normalization, such as narrow bar size, check digit, human readable, and so on.

RFID (v8.10)
A new RFID button, available on the toolbar, provides a direct link to the RFID settings.

TKTEXTIL.TTF (v8.10)
New symbols have been added in TKTEXTIL.TTF to fulfill the COFREET requirements. Refer to the TKTextil.lab sample file for additional information.

Database Manager (v8.10)

The User Interface of the Database Manager has been improved, making it more intuitive and easy to use.

- The general user interface has been refreshed to give it a better look and feel.
- New menu entry "File\Open" allows the user to directly open a basic database file (Access, Excel, dBase).
- It is now possible to "duplicate record(s)" by right-clicking on selected records.
- More feedback is provided to the user when operations cannot be performed due to limited user rights or compliance with database structure.
- It is possible to limit the Database Manager features by modifying the file C:\Program Files\TKI\8\Common\Tools\DMan\ProductSettings.cfg. Only advanced users should attempt this.
- It is now possible to customize the display font.

Print by printer resolution (v8.10)
Uses an algorithm independent to the paper format, to send only the positions and sizes linked to the Windows printer resolution. The current print algorithm adjusts object size and position when you switch, for instance, from a A4 page to Letter page (on a Windows printer). This is similar to the method used in Microsoft Word, and the advantage is that the objects are adjusted at print time so that everything fits on the page/label. The new print algorithm only uses the printer resolution, which means that the object's position and size are fixed, but at print time, you may notice that some objects are outside of the page/label or partially cut.

ActiveX (v8.10)
VC++ and C# ActiveX samples available on CD have been updated to demonstrate how to use Events.

Back to Top

New Device Support

The following devices and their associated drivers have been added in this version:

Fixed Defects

Version	Ticket ID/ Defect ID	Description
2012.00.00		
	17616 - TKX-22864-S6M1	Table ALIAS not accepted with where clause
	18043 - TKX-20389-V0Q8	Fields keep old value when query does not return record
	18023- TKX-17061-V0N0	Linked counters update issue with 2 labels per row
	18041 - TKX-20052-Q4P7	HIBC Wizard omits $$ when using date format YYJJJ and separate bar codes
	18550-TKX-25914-R4G3	Focus was not on quantity field and new printing box
	18567-TKX-24684-S5C7	Bar width of 2/5 interleave barcode not printed correctly in case of some ratio.
	18031-TKX-25387-R9R4	Codabar checksum not calculated correctly
10.00.00		
	54463-20553	Human Readable on GS1 Databar is complete.
	54516-20556	Printer settings now load in Windows printers.
	53085-20066	Job modifier tab now appears in all designated areas.
	63640-20675	Windows printing mode is now available in Runtime.
	72022-20685	Resolved issue with WMF in monochrome palette.
9.10.02		
	54628-20577 54736-20595	Application is now stable when using ASCII file.
	52663-19978 52659-19975	Speed optimization for text with Word Wrap/Fit to Frame features.
	55422-20630	Font and size changes are not modified when data source is changed.
	55124-20624	Variable images coming from formulas are properly managed when used with SENTINEL.
9.00.02		
	49069-19221	Rename method of the PrinterSystem interface is fixed.
	50633-19502 46715-18862	Formula Bestbefore now works with julian day (jj).
	45863-18601	Zoom feature now functions as it did in version 8.50.
	46997-18958	Counter reset on variable change now functions correctly.
	48586-19162	Form no longer appears when Form variables do not exist in layout.
9.00.01		
	45538-18481	Date with variable offset (in case of multiple variables) is fixed.
	45835-18597	The shared list user interface can now properly display different

Version	Ticket ID/ Defect ID	Description
		code page (i.e., Cyrillic).
	45451-18469	Formula variables are now refreshed while printing.
	45675-18661 45862-18600	The automatic page format for Brady IP printers is improved.
8.51.02		
	34391-16068	Excel files with field names that contain Chinese characters are now working.
	33780-15966	Printout for DataMatrix/QR code containing Chinese characters is now working.
	32222-15961	Barcode wizard is now able to enter alphabetical characters for DataMatrix.
8.51.01		
	31161-15576	Counters with values outside of the alphabet are now accepted at print time (backward compatibility with version 6). A warning is displayed at creation time.
	29434-15335	Lite or Pro versions are no longer able to lock objects.
	27277-14994	Maxicode wizard generates valid default data, whichever mode is selected.
	32486-15747	Display is now correct when using a formula that is using other formulas.
8.51.00		
	24884-14218	Decrementing hexadecimal counter is now decrementing properly.
	14249-12208	Printer speed switch is no longer ignored when printing from SENTINEL.
	25866-14508	EAN-14 can now be based on EAN-128 or ITF-14 symbology.
	20913-13318	Some characters descenders were cut off (for example, the bottom portion of "g") in Rich Text fields.
	11697-13708	In the Runtime version, the printable or non-printable option for objects can now be set through ActiveX.

Back to Top

Known Limitations

- Under win2008 R2, Windows 8 and Windows Server 2012, it is required that the NET3.5.1 is selected via "Program and Files\Turn Windows Features On and Off".
  http://msdn.microsoft.com/en-us/library/hh506443.aspx

- Under Windows 8 and Windows Server 2012, if the dongle HASP is not recognized, install the driver manually from the DVD using the following command:
  "<Drive>:\Software\Misc\Hasp_v6.51\Haspdinst.exe -i" (where <Drive> is to be

replaced by the letter of the DVD drive).

- Software Key Protection does not support Proxy with authentication. A license that requires internet connection (Online/Platinum) will not be compatible in such case. A possible workaround is to use a Proxy management application.

- In case of Software Key Protection, IP Security Policy Management (IPsec) settings can create slow response time from Activation server if it is blocked.

- To use this product via RDP (remote application / remote desktop), a network license is required on environments such as Remote Desktop Services (formerly Terminal Services), Citrix,..

- When upgrading CODESOFT, we recommend uninstalling any previous versions before installing the new version.

- With subscription licensing, the computer date/time must be set to the correct date/time and should not be modified.
  For Virtualized environment, refer to SubscriptionLicensing_VirtualEnv-EN.pdf

- Under virtualized environment, manipulation of Virtual Machine VM (i.e. copying or cloning a virtual machine, revert to a snapshot) need to be done with the software unactivated.
  Returning to a snapshot/state created after the *software* was activated, may result in degraded license mode.
  In such case it is required to deactivate/reactivate the License (Please note the limitation on the number of activations granted for the license of the *software*.)

- RTF Field has a limitation when used with Fit to Frame option where the size and/or complexity of the RTF text in the input may cause the displayed text to be truncated.

- Using CODESOFT with LABEL ARCHIVE and Windows Firewall:
  The Windows firewall will try to block the connection to CODESOFT and you will get a system message asking to block or to unblock. Choose Unblock. The labeling software will be added automatically to the list of exceptions in Windows Firewall Configuration parameters.

- If you are using a hardware key protected version under Windows 7, the dongle may not be recognized. In this case, you must install the HASP driver manually. Run "InstallDir"\Tools\Donlge\ HASPUserSetup.exe.

- Text objects with composite data sources or different styles (font size or attributes) should be edited using the text properties dialogue only. If you use the text wizard, the text object becomes fixed with a uniform style.

- When importing an image from a network, a path like //MachineName/Path/Filename cannot be entered directly into the "Image Selection" dialog box. The workaround is to map the network drive, or to drag and drop from the explorer.

- When printed: If a mixed formatting string is used in the input mask, before entering the value, use the backspace button to avoid the loss of the first character.
  To enter a value abc123
  Press " <backspace>abc123" if the format string is "@@@###"

- While using the animation option in the wizards, performance may be slightly reduced.
  Turn off this option for faster performance if needed.

- With a hardware key license, when running CODESOFT while system is not fully initialized, CODESOFT may run in EVALUATION mode.
  Make sure the system is fully loaded before running CODESOFT.

- Please note that you may need Administrator's rights to perform some actions, such as adding a printer with non-direct access or creating a system DSN data source. Please verify that you have sufficient rights before performing these actions.

- Query definition only supports Tables within the default schema. If it is necessary to use a table from another schema, the SQL mode should be used, using a syntax like: SELECT * FROM Schema.Table.

- The Database Manager is a generic database tool that relies on OLE DB Provider (ODBC is not supported). OLE DB Provider or the DBMS itself can both have some limitations. For example, with an Access database, when you set 3 unique fields in Database Manager, only the first one will be set. The recommendation is to use the internal DBMS tools to modify database structure, especially when working on advanced actions (like multiple constraints and primary key modification). The same is true for big tables where the response time can be slow on some operations.

- A database connection must be linked to the DatabaseGrid control displayed in sample form "DBForm.xmf" in order to show information (i.e.; identity.mdb).

- ODBC drivers are recommended for PostgreSQL. With OLEDB drivers, fields may not be enumerated.

- The **Manage Multiple Pages** option for ListField is not supported with POF technology.

- Microsoft defect: MFC Applications leak GDI objects on computer running Windows Server 2003 or Windows XP. Refer to article 319740 in the Microsoft Knowledge Base: http://support.microsoft.com.

- For full Chinese-sensible code support under WinXP\2003\2000, the following prerequisites are required:
  - GB18030 support package should be installed: http://www.microsoft.com/downloads/details.aspx?familyid=fc02e2e3-14bb-46c1-afee-3732d6249647&displaylang=en
  - Files for East Asian languages should be installed

  For WinXP/2003: 54936 Gb18030 Simplified Chinese codepage should be selected.
  Note, that for win2000, selection of 936 codepage is enough.

- The label version is guaranteed when using ascending version. When using a different a version, please check that all versions are in the same range:

Backward Compatibility Range	CD Masters	Serialization Version
8.00.00-8.00.05	CS800_XX_R1 CS800_XX_R2 CS800_XX_R2_121605 CS800_XX_R2_010606 CS800_XX_R2_020106 CS800_XX_R2_030806	801

Compatibility with other TEKLYNX Software

CODESOFT v2012 is compatible and fully tested to work with the following TEKLYNX software packages:

- LABEL ARCHIVE 10
- SENTINEL 2012
